Subject: NANA Wall

Stann,

Thanks for being on top of your game yesterday. With the absolute dilution of talent these days in the construction industry it is refreshing to work with someone who knows his product. I have a phone call this afternoon with Greystar and will provide feedback to you and the team after we resolve some items. I wanted to get your opinion on using concealed rod devices vs. surface in your storefront doors. Opinion per the access control vendor is that they are a maintenance problem. What is your experience. I have for years done concealed. Also, what is your opinion of utilizing only the top rod and not the bottom. I understand more of a break-in risk but less wear and tear on the hardware.

Finally the reason for my email. We have worked out all the deflection questions for the NANA wall system on the 6th floor. Please proceed with shop drawings.

Thanks and let me know if you have any questions.

JR
